EDUCATION

Western New England University Springfield, MA
College of Engineering
Bachelor of Sciences in Computer Engineering *Expected Graduation*: *December 2027*

- Major GPA: 3.0
- Relevant coursework: Electrical Engineering, Microprocessors, Embedded Systems, VHDL, Real-Time Embedded Kernels, Calculus, Signals & Systems, Electronic Circuits, CPU Architecture, SPI, UART

Holyoke Community College Holyoke, MA
Associate of Sciences in Computer Engineering *May 2025*

- GPA: 3.0 – Consistently recognized on Dean's List

EXPERIENCE

HandshakeAI Remote
Independent Contractor – Confidential AI Projects *November 2025 - Present*

- Analyze LLM outputs for complete accuracy, clarity, and depth across a variety of topics
- Maintain project quality by evaluating peer work as a quality assurance contributor, offering feedback to improve accuracy and alignment with standards

PROJECTS

Jet Engine Project Springfield, MA
Pratt & Whitney Research Project *October 2026 - Present*

- Collaborating with engineering students to develop an embedded ECU for a functional jet engine.
- Contributing to a C++/Qt graphical user interface for monitoring engine telemetry.
- Working with Raspberry Pi-based hardware and embedded software to support real-time monitoring.

Three-Band Audio Equalizer Springfield, MA
Electrical Engineering II Design Project *April - May 2026*

- Designed a three-band audio equalizer using bass, midrange, and treble filters with an operational amplifier summing circuit.
- Applied frequency-response analysis and circuit design calculations to determine filter center frequencies, gain, and component values.
- Used LTSpice and MATLAB to model and analyze the equalizer's filter and amplifier circuits.

Multi-Level Dual-Gate Parking Lot System Springfield, MA
Microprocessors II Course Project *March - May 2026*

- Designed a dual-gate parking system using a microcontroller to track vehicle exit and entry.
- Developed logic to update available parking spaces based on real-time input from entry and exit points.
- Integrated IR sensors to simulate vehicle detection at both gates with LCD display for real-time feedback.
- Structured the system to support scalability for multi-level parking and further sensor integration.

Temperature Sensor with Display and Fan Control Holyoke, MA
Circuit Analysis Course Project *February 2025*

- Designed and built a temperature sensing circuit using a microcontroller and an analog temperature sensor.
- Implemented fan control logic, PWM output, LCD data display, and ADC.
- Simulated and analyzed performance using MATLAB and Multisim.

HARD SKILLS

- Expertise in Assembly, Assembly C, MATLAB, LTSpice, C, VHDL, Java, Linux, C++, SolidWorks,
